2026 Formula 1 Season

November 10, 2026

1 World Champions

1.0.1 2026 Title:

Lando Norris won the WDC in the 2025 season.

1.1 2027 Title

Kimi Antonelli won the WDC in the 2026 season.

At the Mexico Grand Prix, Kimi Antonelli was officially crowned as the Champion of this season

As expected, Max Verstappen showed the fans during the Singapore GP that he still needs to be taken into account and proved it again with his P21-P2 climb last weekend, even though he is out of contention for the first time since 5 years.

The Sao Paulo Grand Prix delivered a rather interesting Qualifying Session, ~~with the worst cars of the grid~~ with some surprising cars in Q3 - the Haas and the Aston Martin.

2 Calendar

Races still left as of now:

- Las Vegas
- Qatar
- Abu Dhabi

3 Standings

Even though both the WDC and WCC are decided, these are the current standings:

3.1 Current WDC standings:

1. Kimi Antonelli
2. Max Verstappen
3. George Russell
4. Lewis Hamilton
5. Charles Leclerc
6. Lando Norris
7. Oscar Piastri
8. Isack Hadjar
9. Liam Lawson
10. Pierre Gasly

3.2 Top 3 WCC standings

The up to date WCC standings can be seen in Table 1.

Team	Points
Mercedes	652
Ferrari	510
Red Bull Racing	415

Table 1: WCC standings.

4 Surprises

Surprising events this season:

- ☑ Ferrari mistake turned to upgrade
- ☑ Lando back-to-back win (Sao Paulo GP)
- ☑ George Russell Grand Slam
- ☒ midfield team podium
- ☒ Double DSQ
- ☑ 3 DNFs at home races
- ☑ Youngest WDC record beat

5 Other

Find more at: Google Colab

If a driver finishes P5 in all races, his number of points will be:

```
x = 10
y = 23 * x
print(y)
```

6 Physics in Motorsport

Frictional force:

$$F_{\text{friction}} = \mu \cdot R_{\text{car}}$$

Simple formula for speed:

$$v = \frac{s}{t}$$

Kinetic energy for constant velocity:

$$E_k = \frac{1}{2} M_{\text{car}} v^2$$

Centripetal force acting on the car driving on a circle/curve:

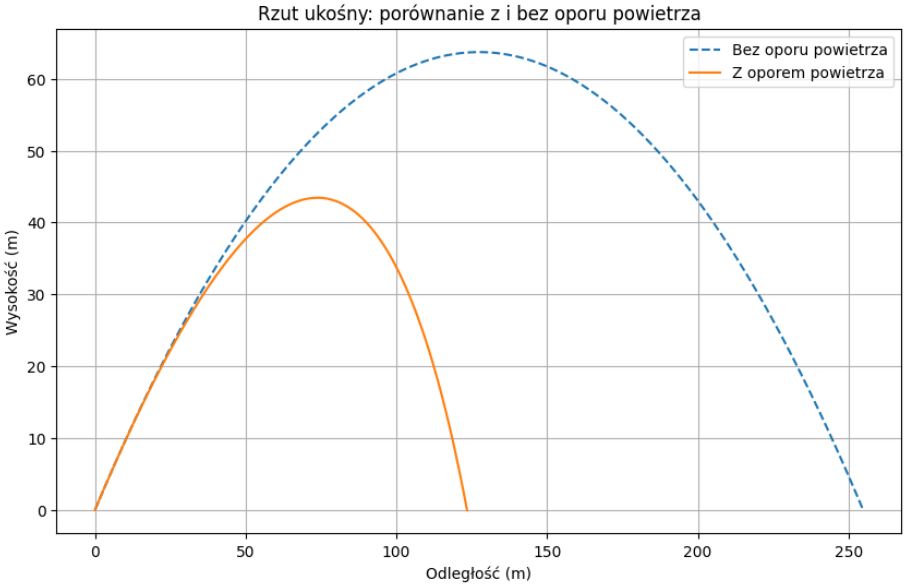

$$F_{\text{Cen}} = \frac{M_{\text{car}} v^2}{r_{\text{corner}}}$$

Maximum cornering force of the tires:

$$F_{\text{max}} = \sqrt{\mu_{\text{track}} g M_{\text{car}}}$$

Maximum cornering speed:

$$v_{\text{max}} = \sqrt{\mu_{\text{track}} r_{\text{corner}} g}$$
